SKILLS

- Agile/Extreme Programming
- CI/CD Infrastructure (CircleCi, Github Actions, Jenkins)
- Ruby on Rails (RSpec, Cucumber, Minitest)
- Redis, SideKiq and DelayedJob
- SQL (PostgreSQL, MySQL, SQLite, T-SQL)
- Basic GoLang Understanding
- OAuth and SAML integrations
- AWS
- Python
- GraphQL
- Git (Github and Bitbucket)
- Perforce
- Slack and MS Teams

EDUCATION

Bachelor of Science in Computer Science

Western Connecticut State University
2017–2019

Bachelor of Science in Marine Biology
Associates Degree in Vessel Operation
Maine Maritime Academy

2011–2016

EXPERIENCE

Senior Software Engineer

NRC Health (formerly PatientWisdom)

09/2019–Present

- ◇ Tech lead for Rails and React web application that embedded itself in patient portals and patient's medical charts
- ◇ Built and maintained a customizable OAuth integration that enabled the product to various EHR systems. Collaborated with diverse healthcare systems to successfully implement and optimize integrations tailored to each organization's unique requirements
- ◇ Collaborated with a newly formed team to foster effective workflows by implementing best practices from Extreme Programming (XP) and Continuous Delivery, driving productivity and quality
- ◇ Led the seamless migration from a PaaS platform to AWS, ensuring zero downtime and maintaining high availability throughout the transition
- ◇ Architected the modernization of a legacy system by implementing a CI/CD pipeline, paving the way for a seamless transition to continuous delivery practices
- ◇ Established standards for automated testing, Agile methodologies, and modernized software development lifecycles to enhance efficiency and ensure best practices
- ◇ Designed and implemented a comprehensive load testing suite to ensure system stability under high traffic conditions. Integrated the suite into the CI/CD pipeline, enabling automated performance validation for all new builds.
- ◇ Implemented and managed Application Performance Monitoring (APM) and logging tools to enhance system observability. Established early warning systems and automated alarms to detect issues proactively and execute corrective actions where possible.

Software Engineer and Researcher 01/2019–09/2019

Western Connecticut State University Weather Center and Data Science and Systems Lab

- ◇ Developed, maintained and optimized Python and Bash scripts to automate weather reporting using third party sources such as NOAA
- ◇ Directed the team on the hardware/programming work to create a weather indexing system
- ◇ Working with Professor to teach students to create and develop professional database applications using PostgreSQL

PROJECTS

Tactical Supremacy Game

Solo free time project

2023–Present

- ◇ WIP multiplayer turn based strategy game that is Rails backend with a Unreal engine frontend.
- ◇ Communication through HTTP and websockets. HTTP for user to interact with game state and websockets to keep game state synchronized accross player lobby
- ◇ Focus on horizontally scalable data ingestion and output. The idea to focus on learning how to deal with a high load system that requires real-time Communication

ClassDB and LearnSQL

Western Connecticut State University Weather Center and Data Science and Systems Lab

2017–2019

- ◇ Worked with team to update an FOSS database application to allow students to use a SQL sandbox database and give teachers ability to oversee those databases
- ◇ Maintained code on in-production system used by over 100 computer science students since Fall 2017 with plans to launch to colleges throughout Connecticut
- ◇ Worked with other software developers to created a free and open sourced interactive website for learning and practicing SQL online
